This proposal has been written for the use of Client. Whilst every care has been taken to ensure that the contents of this proposal are complete and realistic, Abhi reserves the right to change or withdraw the document in the light of further information on Client specific requirements.

General Statement

All the information, representations, statements, opinions and proposals in this document are correct and accurate to the best of our present knowledge but are not intended (and should not be taken) to be contractually binding unless and until they become the subject of separate, specific agreement between the parties.

The information contained herein has been prepared on the basis that the agreement entered into between the parties as a result of further negotiations will be based on the terms of the Abhi Customer Agreement.

This proposal is valid for a period of **30 days** from the date of proposal submission.

If not otherwise expressly governed by the terms of a written confidentiality agreement executed by the parties, this proposal contains information which is confidential to Abhi and is submitted to Client on the basis that it must not be used in any way nor disclosed to any other party, either whole or in part. The only exception to this is that the information may be disclosed to employees or professional advisors of Client where such disclosure is on a need-to-know basis and is for the purpose of considering this proposal. Otherwise, disclosures may not take place without the prior written consent of Abhi.

1 EXECUTIVE SUMMARY

The document is to cover the concept & design elements of Abhi Financial Wellness & Financing as a service. Further, this document includes key problem areas that the subject service solves, along with key stakeholders, supplemented with the processes and workflows as to how they connect all pieces of the puzzles to solve the problem.

Abhi financial platform is a set of services intended to solve liquidity and income frequency problems for any market by reaching individuals and businesses through partners utilising its OpenAPI services in any market. This includes but is not limited to:

- Earned Wage Access and its variants, such Advance Salary Access
- Payroll Financing
- Invoice Factoring and Reverse Factoring
- Revenue Based Financing
- Collateral-backed Lending (Stablecoin, Gold etc.)

Technology needs continuous efforts to meet changing business requirements. Therefore, selection of a Technology Partner is a key for “success” in such initiatives. Abhi’s solutions provide a unique blend of technology, industry and methodology expertise to deliver cutting edge results at rapid speed and low delivery risk. Each Abhi service is tailored to each customer and has a unique business challenge. Our specialized solutions are focused not just on addressing your pressing business needs, but also on founding long-term partnerships to help resolve your business challenges.

Abhi team consists of internationally experienced senior executives and technology specialists where each team member possesses specialized industry knowledge and brings a global network of renowned industry and technology experts. Abhi’s wealth of knowledge and skills acquired in implementing similar projects globally will be an added comfort factor for Client.

Abhi intends to work closely with the Client team to meet the requirements and develop & deploy a state of the art and robust system. We are confident that our proposal shall offer a realistic and cost-effective opportunity for Client to have a cutting-edge solution and shall be glad to discuss and/or clarify any part of this proposal.

2 ABHI BACKGROUND

Based out of Pakistan, Abhi is one of the leading financial technologies company having its global reach with offices in UAE, KSA, Oman and a bank and development centres based out of Pakistan. Founded in 2021, the company remains focused on its core activities as financial service integrator and a provider of the most robust and resilient Financial Wellness & Financing Platform. The company's strategy which is elucidated by a determined and compelling focus on convergence and innovation, strives to establish Abhi as a synthesized speculator and benchmark for new IT services globally.

Achieving high performance in the financial markets industry, Abhi secured [Series A round of funding of 17 million USD](#) in the first its year and expanded its operations outside Pakistan in the next year.

Abhi was awarded [Technology Pioneer 2023 by World Economic Forum](#), a first for Fintech in the MENAP region. Furthermore, [ABHI Becomes MENAP's First Fintech to Issue Islamic Bonds \(Sukuk\) of PKR 2 billion](#) in 2023. Most recently, Abhi also completed the acquisition of a bank in Pakistan in early 2025.

Our financial services provide a unique blend of technology, industry and methodology expertise to deliver cutting edge results at rapid speed and low delivery risk. We use our financial understanding to create tangible value for customers in terms of strategy as well as implementation.

Abhi has demonstrated consistent growth since inception. This shows the confidence of our customers that our engagement with them is based on long term "Technology Partnership", and not just on transactional business.

Abhi is now seen as a "Transformation Catalyst", helping enterprises transform into more efficient, and transparent businesses through use of technology. Abhi has provided several breakthrough transformational engagements for customers across the globe. Detailed information regarding Abhi can be found on our website <https://abhi.co>.

3 SOLUTION DESCRIPTION

This proposal focuses on Abhi offering 2 solutions, mentioned below, through its OpenAPI platform to the Client. Both solutions focus on individuals who are being serviced by the Client. The Client has clarified their current focus is on servicing freelancers in Pakistan and Egypt by extending their digital banking services to these customers. The freelancers will have an account held with the Client and/or its partners which they will be utilising to collect payments. Both the solutions below allow the Client to extend value added services to these freelancers.

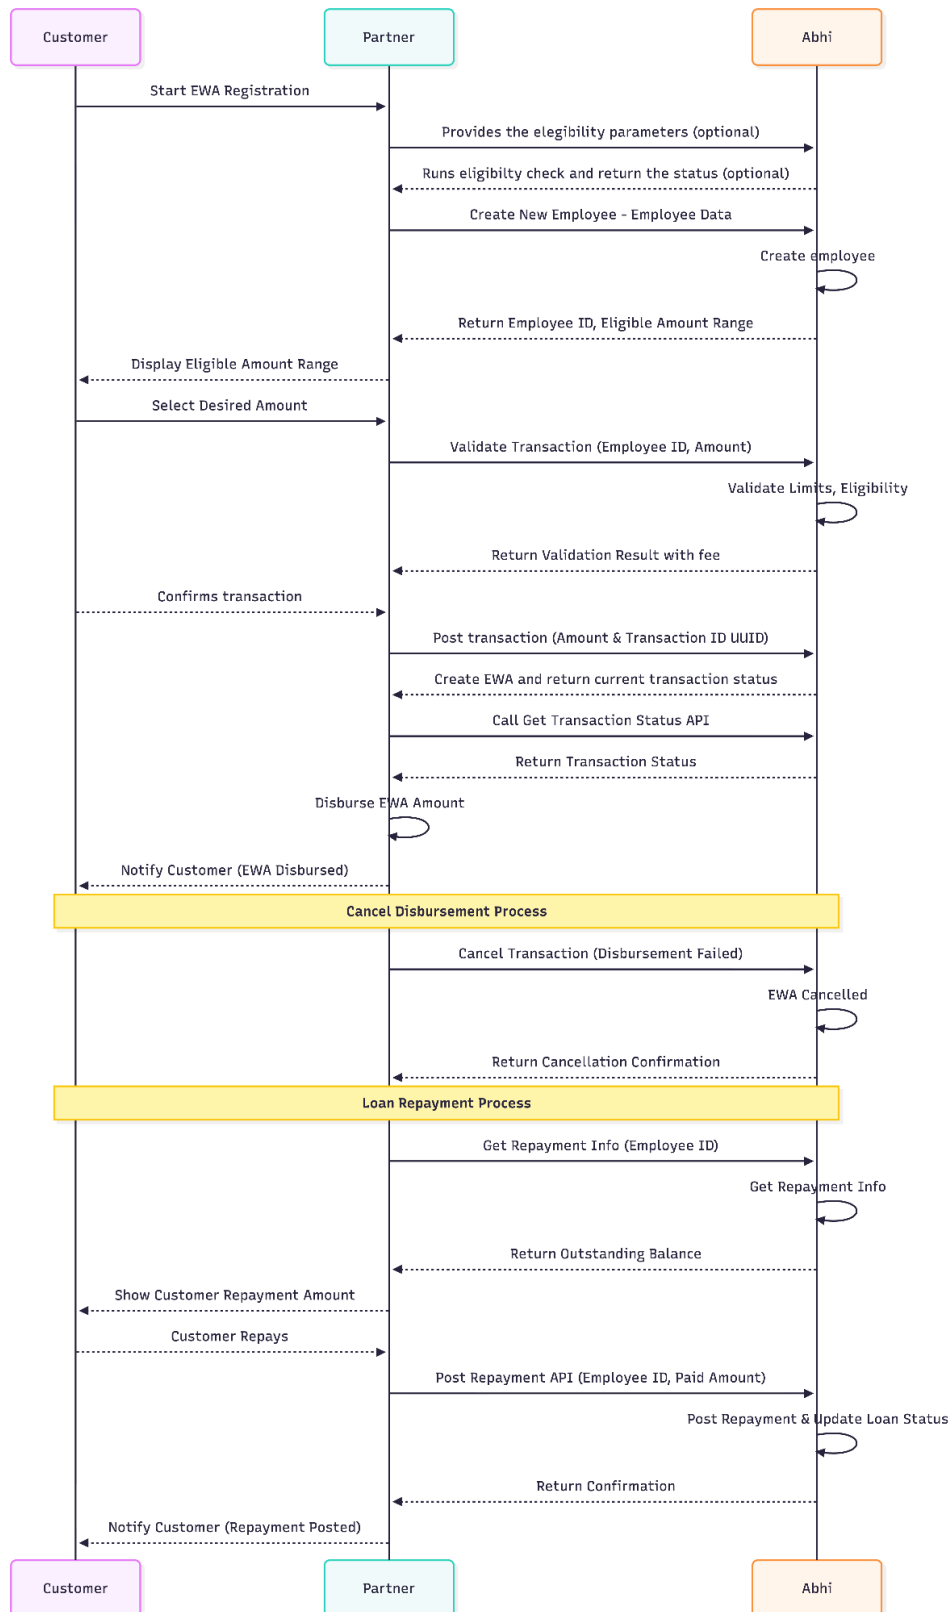

3.1 Earned Wage Access (EWA)(Software-as-a-Service)

This solution will be made available to the Client to use in whatever jurisdiction the Client wants to. Abhi will be extending its technology via APIs without taking any PII information from the Client. Abhi's engine can be used to check user eligibility, create and update users, manage user disbursements, user repayments and have required checks and limits in place.

The Client will integrate Abhi's APIs as per the requirement, having full control of UI/UX with Abhi powering the feature in the background. The flow will be as follows:

1. Eligible user (Client can decide itself or use Abhi) initiates EWA process
2. Client creates user in the Abhi system and retrieves the eligible amount (eligible amount is calculated by the minute based on the salary amount)
3. User makes request for transaction
4. Upon successful posting to Abhi system, Mal moves funds to user's wallet
5. In case of any failure to disburse, transaction can be pulled back from Abhi system
6. Mal obtains the outstanding amount of the user and initiates repayment via debiting user wallet and moving funds to its own account and posting the repayment to Abhi

Note: Monthly and daily limits, eligible amount capping based on absolute or percentage amount, disallowing defaulters from further transactions and more is covered by Abhi system.

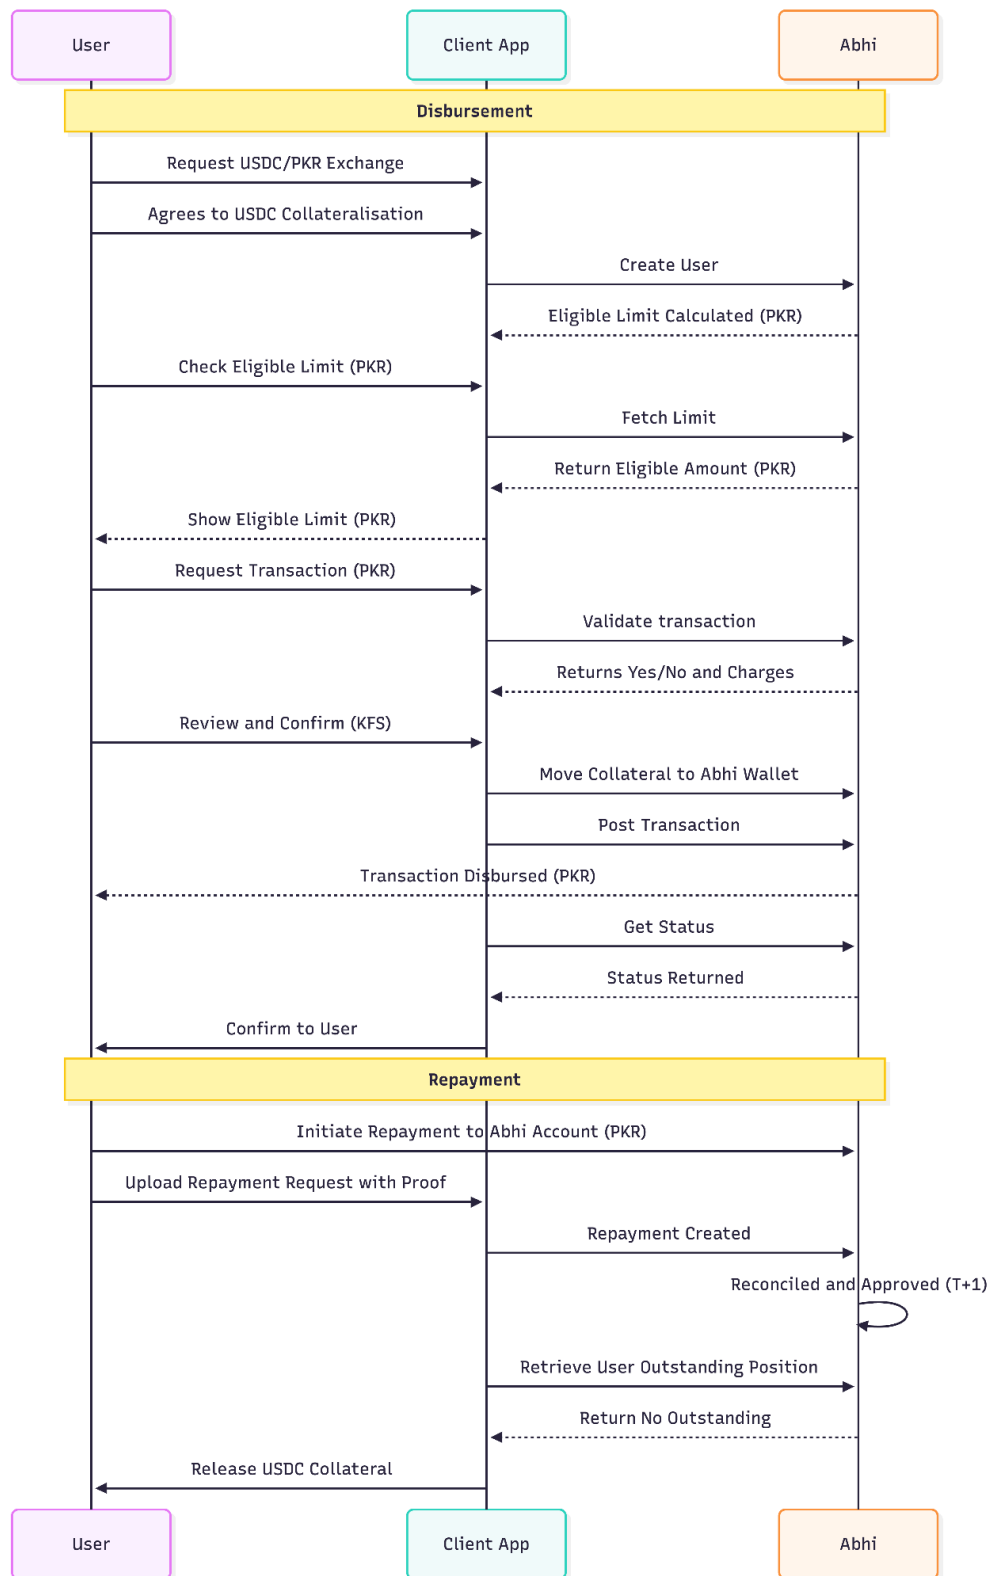

3.2 Stablecoin Off-Ramp via Lending

This solution is designed to facilitate users in Pakistan with off-ramping their stablecoin without actually having to let go of their stablecoin. In Pakistan, with tight capital controls, no formal regulation around cryptocurrency and increasing crackdowns by government authorities, it is becoming more and more difficult for users to buy and sell cryptocurrency. Those who are able to purchase do so from the P2P market or through friends and family abroad. Those who want to exchange their cryptocurrency for PKR struggle as they are afraid of inquiries that may be done by authorities and at the same time the difficulty that they would face if they would want stablecoin again. Holding stablecoin is also a very popular option for Pakistanis due to the weak PKR. Abhi offers a solution to stablecoin wallets and digital banks like Mal to extend a service, via API integration, to their customers wanting PKR in Pakistan. The flow is as follows:

1. User requests to exchange USDC for PKR on Mal application
2. User agrees to collateralise USDC and is then created in Abhi system along with relevant bank/wallet details for disbursement in Pakistan
3. Abhi returns eligible limit to Mal to show the user
4. User requests and confirms PKR amount that will be received along with PKR amount that will have to be paid back with charges (can do different loan tenures and payback plans)
5. Collateral moved to Abhi wallet held with Mal and transaction posted to Abhi system
6. Abhi completes disbursement within 30 seconds
7. Mal fetches status, if status is failed collateral should be immediately released and moved back to customer wallet
8. If status success, loan considered disbursed and customer has to make repayment as per schedule
9. Collateral released upon successful completion of all repayment, in case repayment not received at 30 days past due, collateral will be seized by Abhi.

Note: Unlike the SaaS model in 4.1, this model involves Abhi as a lender in Pakistan as well.

4 SERVICE LEVEL AGREEMENT

Abhi guarantees the following:

- 99% up time, excluding planned maintenance for which the Client will be informed, force majeure events, failures of the internet, enforcement of state or government regulation and acts or omissions of Client or its users
- API Response Time < 30 seconds

Severity Level	Impact	Definition	Initial Response Time (Business Hours)	Next Response Time (Business Hours)
Severity 1	Critical	A production system is down or a mission critical failure in a production system is imminent. A large number of users are blocked from work. This is a showstopper: the system is not usable until the issue is fixed, and no workaround is available.	3 hours (basic) 2 hours (premium)	6 hours (basic) 4 hours (premium)
Severity 2	Major	A small number of users are blocked from work. A large number of users are affected but not blocked. Some functionality is not available.	6 hours (basic) 4 hours (premium)	8 hours (basic) 6 hours (premium)

Severity 3	Normal	A small number of users are affected. Some functionality doesn't work or works partially. Noticeable performance degradation.	8 hours (basic) 6 hours (premium)	12 hours (basic) 10 hours (premium)
Severity 4	Minor	A minor issue: the system is still fully usable with limitations or workarounds.	12 hours (basic) 10 hours (premium)	16 hours (basic) 12 hours (premium)
Severity 5	None	The query is about something with no system impact and can be readily circumvented. This includes things like queries about product functionality, account requests, and general feedback.	24 hours (basic) 18 hours (premium)	48 hours (basic) 24 hours (premium)

Note: Business hours should be calculated as 9am to 5pm according to working days in the UAE.

5 COMMERCIALS

To be proposed and agreed after alignment of the scope

For reference:

3.1 Earned Wage Access (SaaS) will include one-time fee, monthly usage fee as a % of TPV (with a minimum charge that can be waived for first few months), premium support plan fee (optional)

3.2 Stablecoin Off-Ramp via Lending will include no fee charged to Mal, Abhi's revenue will be driven by customer fee payment for the loan and deposit revenue from collateral held in Abhi wallet with Mal
