TRUSTED INDUSTRY INGENUITY

Established for excellence. Adapted for agility.

Responsive handling.
Guided navigation.

Reimagine Banking and Payments

- A stable, established and flexible platform
- Enablement of best-in-class products & service
- Rigorous compliance framework
- Path to unified platform including core banking

Project Team Structure

i2c's robust and comprehensive implementation and training process ensures you are onboarded quickly and smoothly.

Implementation to Go-Live

Post Go-Live

Implementation Project Manager (PM)

- Drives project delivery and implementation until Go-Live
- Sets up project, tracking, and delivery
- Coordinates setup with internal and external stakeholders
- Provides weekly updates and escalates possible risks or delays
- Provides username and training on inquiry logging tool (OTRS)

Solution Architect (SA)

- Reviews business requirements and helps document business use cases
- Maps client business requirements to systems and technical requirements
- Finalizes scope and identifies standard and custom requirements

Product Support & Quality Engineering Group

- Participates in business requirements review
- Assists in addressing product related technical queries
- Configures and verified standard modules per client need
- Conducts training and final Program Review
- Provides technical support during UAT for successful launch

Account Manager (AM)

- Primary point of contact
- Oversees of day-to-day operations, post go-live

Product Support (PS)

Primary point of contact for relationship and expectation management

Oversees of day-to-day operations, post go-live

Manages day-to-day issues and program support

Thank You.
