

SwiftX

Stablecoin-based cross-border payments infrastructure

Prepared for

SwiftX Vision

Our vision is to enable fully regulated, instant and cost-effective exchanges of value across the globe.

\$

₪

₪

Stablecoins combine the stability of fiat currencies with the speed, flexibility, and transparency of blockchain technology

Price stability with digital performance

Combine trust of fiat with efficiency of blockchain - enabling reserve-backed, transparent, and programmable payments

Fast and low-cost transactions

Real-time, 24/7 settlement without relying on correspondent banking networks - cutting costs significantly ¹

Resilient payout infrastructure

Blockchain-native payout systems enable integration with multiple partners - increasing payment rail resilience

Regulatory clarity

Regulatory frameworks like the **U.S. GENIUS Act** and **Europe's MiCA**, stablecoins are entering a new era of legal certainty, consumer protection, and compliance.

Why us?

Backed by global investors, SwiftX has a strong track record in the Middle East, with **\$2B + remittances processed to South Asian countries**

B2B focused

Currently working with 3 FI clients sending funds and 2 global partners for conversions/payouts

\$2B+

Transaction volume processed

+30%

Monthly volume growth¹

Compliant

Engaged with central banks globally to enable stablecoin receipt and send functionality

Value for MTOs, Exchange Houses, Banks

SwiftX enables faster, cost-effective, always-on payments for bank's competitive edge while maintaining liquidity and compliance

Instant and 24/7 funds settlement

Replace the 1-3-day SWIFT lag with minutes-level clearing, so your corporate clients can manage cash in real time.

Up to 80% lower transfer costs

Eliminate multiple correspondent layers and FX spreads, enabling your bank to capture and keep, corporate clients and mid-market rates.

High-margin, liquidity-neutral income

Earn on conversion, custody and wallet services without tying up balance-sheet liquidity, pre-funding Nostros accounts or expanding lending exposure.

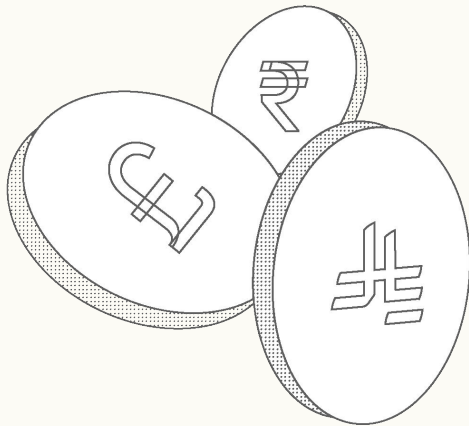

End to end payments orchestration

Automate routing, FX and on/off-ramping from a single dashboard with embedded KYC/AML/KYB.

Unlocking C2C & B2B Cross-Border Payments

Traditional SWIFT infrastructure is costly and inefficient for low-value international payments, resulting in high fees and 1-3 day settlement delays. Seamless **fiat-to-stablecoin-to-fiat transfers** via approved financial institutions can **improve efficiency while ensuring full AML/KYC compliance**.

What SwiftX provides:

- Seamless **API integration** with core banking systems
- **Real-time dashboard** for transparency
- Automated **conversion & liquidity engine**
- **AML/KYC/KYB layers** for monitoring & control

What it enables

- **Faster** - near-instant settlement
- **Cheaper** - no intermediary fees
- **24/7** - always-on global rails

Full transaction visibility of stablecoin transfers and API payments integration.

Seamless API integration for instant, 24/7 RFQ quotes and payments

Real-time dashboard* for full visibility & control

IMPS Payout

POST <https://api.swift.money/v1/payouts/gls>

Facilitates an IMPS payout to a specific beneficiary.

		Make a request to

Designed to facilitate IMPS (Immediate Payment Service) transactions, this endpoint allows for immediate fund transfers. Parameters include the merchant's record ID, bank name, branch, IFSC code, account number, and the amount to be transferred. This endpoint ensures quick and reliable transactions, adhering to the high standards of the IMPS network, and catering to the needs of real-time payment processing.

Response

```
{
  "status": 1,
  "code": 200,
  "message": "Success"
}

MAL Proposal

What can we build for you?

Embedded Web3 wallet for fiat-to-stablecoin transfers: unlocking distribution at scale

One integration unlocks access to stablecoins

By embedding stablecoin wallets inside MALs native infrastructure, we turn a single integration into access to stablecoin spend and receipt at an individual and business level

Native bank offering

Fiat-to-stablecoin transfers run directly inside MAL apps, keeping users, branding, and flows within regulated financial institutions.

Infrastructure-level control

Built-in compliance allows MAL to scale safely, while SwiftX manages technology implementation and delivery, with strict controls in place

The fastest-growing populations & remittance corridors still remain structurally broken

Incumbents struggle with inefficient settlement and regulatory complexity in high-growth emerging markets in MENA and Asia

MAL has a unique regulatory advantage with UAE licensing, with the ability to enable major remittance markets

3-4%

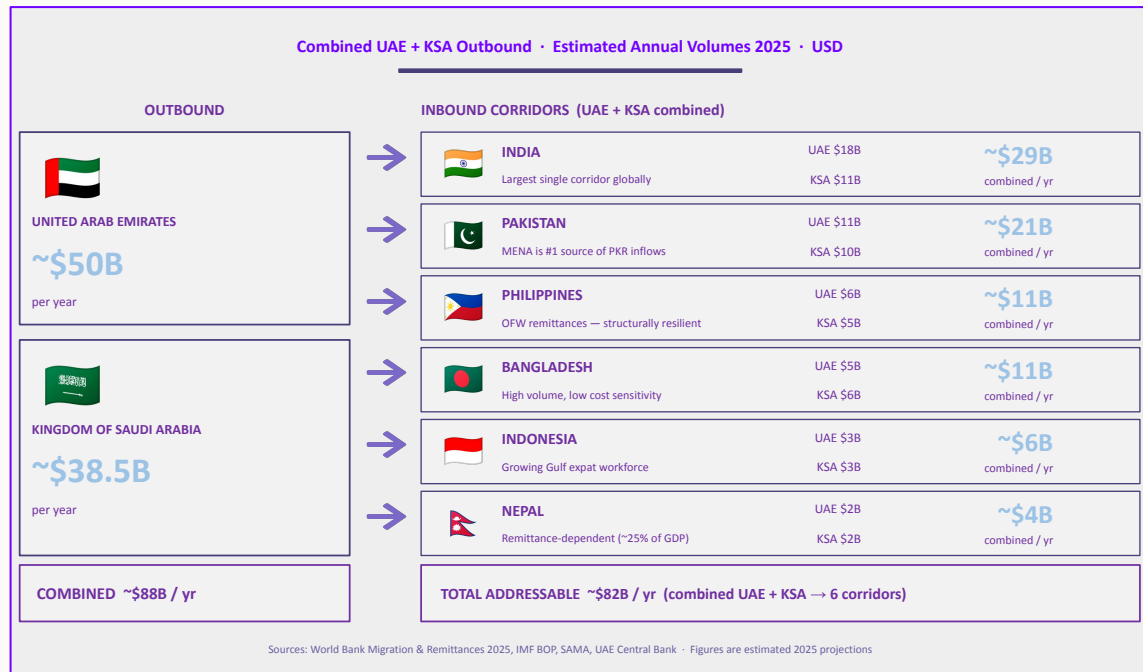

Average remittance fee

Estimated annual cost of \$2bn

1-3

Days of settlement

Many intermediaries

Embedded wallet architecture: orchestration, custody, compliance, and scale

Programmable Conversion

Into local currency, controlled by the end user or institution

Closed-loop off-ramping

Via approved liquidity and payout partners only

Embedded wallet layer

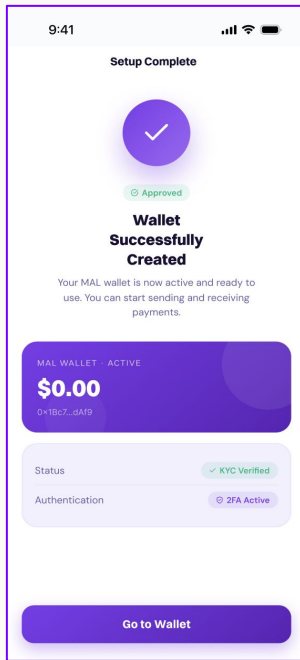

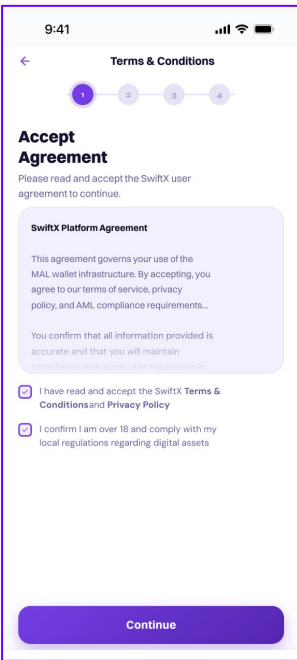

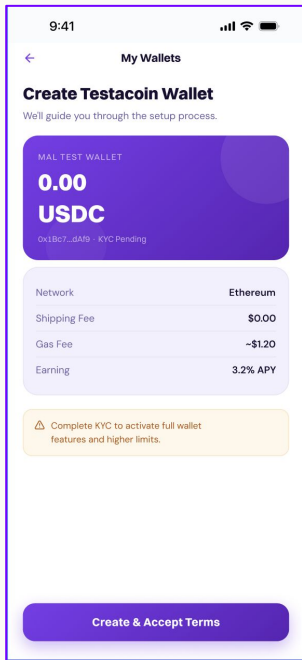

Built on SwiftX's live routing, FX, settlement, and compliance stack

Built-in Compliance

Full KYB, AML, transaction monitoring, and Travel Rule enforcement by default

Users can create their own stablecoin wallet as part of MALs infrastructure

MAL users can create their own wallets within MAL's existing infrastructure

This enables a compliant approach to utilization of stablecoins, while providing innovative products to customers via a trusted relationship

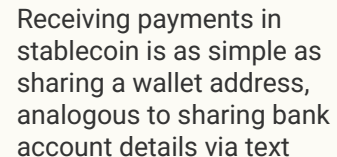

Users can whitelist beneficiary wallets to enable payments with minimized risk

The image displays four sequential mobile app screens for adding a beneficiary wallet:

- Screen 1: Add recipients** - Features a large purple text label "Add recipients" and a colorful gear-like icon.
- Screen 2: Add beneficiary wallet** - Shows a list of "MY BENEFICIARY WALLETS" with two entries: "Client Wallet 1" (Verified) and "Client Wallet 2" (Pending). A purple button at the bottom says "Add New Wallet".
- Screen 3: Add Wallet Address** - Prompts the user to "Enter the wallet address you want to whitelist for sending." It includes fields for "WALLET LABEL" (e.g., My Coinbase Wallet), "BLOCKCHAIN NETWORK" (Ethereum (ERC-20)), and "WALLET ADDRESS" (0x...). A "Continue to Verify" button is at the bottom.
- Screen 4: Validation Status** - Displays "SwiftX is Validating Address" with a message: "We're checking blockchain records and verifying address ownership. This may take a moment." It shows an "ETH address" being validated and a "Back to Wallets" button.

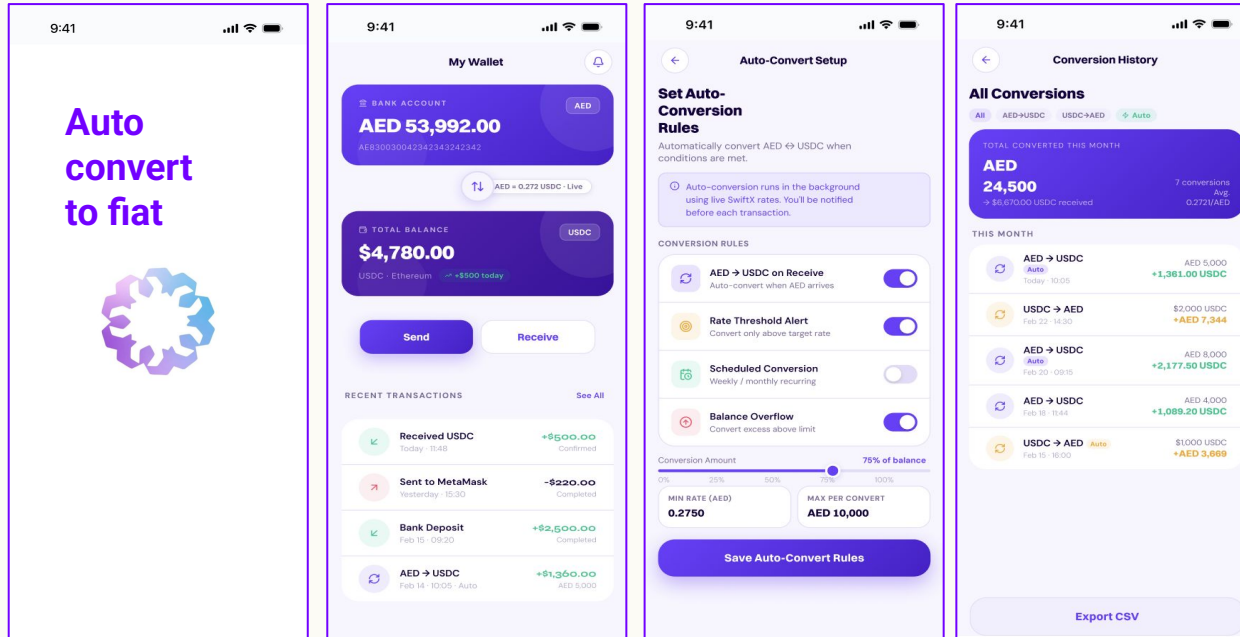

Adding wallets to enable payments via stablecoin is seamless, and is done in a manner that gives the user safety cues

All wallets are subject to ownership verification to ensure minimized risk

Pending payments are tracked in real time, and there will be a dashboard to view all transactions similar to a statement of accounts, all in a simple drop down format

Users have the option to auto convert on receipt, into their linked bank accounts

Stablecoin wallets and existing fiat bank accounts are linked, to enable maximum flexibility on client preference

Rules can easily be configured to receive value as either fiat, or stablecoin - irrespective of which form of value was received

MAL: Making a payment in stablecoin (option to seamlessly use fiat account funds)

Users can make payments in stablecoin, utilizing their fiat bank accounts funds seamlessly (1/2)

The image displays four sequential mobile app screens for a payment process:

- Pay in stablecoin:** Features the title "Pay in stablecoin" and a colorful circular logo composed of interlocking puzzle pieces.
- Make Payment:** Titled "How Would You Like to Pay?", it prompts the user to choose a payment method. It shows "SENDING TO" as "Pakistan - PKR" and a "Live Exchange Rate" of "1 USDC = 279,44 PKR". Under "PAYMENT SOURCE", it lists "My Wallet 1" (USDC 13,500) and a "Bank Account (IBAN)" (Bank transfer - 1-3 business days). A "Continue" button is at the bottom.
- SwiftX Quote:** Titled "Enter Amount", it shows the user entering "250" USDC. It displays the "Recipient receives" amount as "69,860.00". A numeric keypad is provided for input. It also shows the "Available Balance" as "\$13,500.00 USDC" and the "After Send" amount as "\$13,250.00". A "Get Quote" button is at the bottom.
- Recipient Details:** Titled "Recipient Information", it asks to "Enter the bank details for your recipient in Philippines". It shows a "Bank Transfer" option for "Pakistan - PKR" with a "30 min" estimate. Fields for "FIRST NAME" (Maria), "LAST NAME" (Santos), "BANK NAME" (BDO Unibank), and "ACCOUNT NUMBER" (10-digit) are present. A note states: "Your recipient's bank details are encrypted and never stored after the transfer is complete." A "Continue to Quote" button is at the bottom.

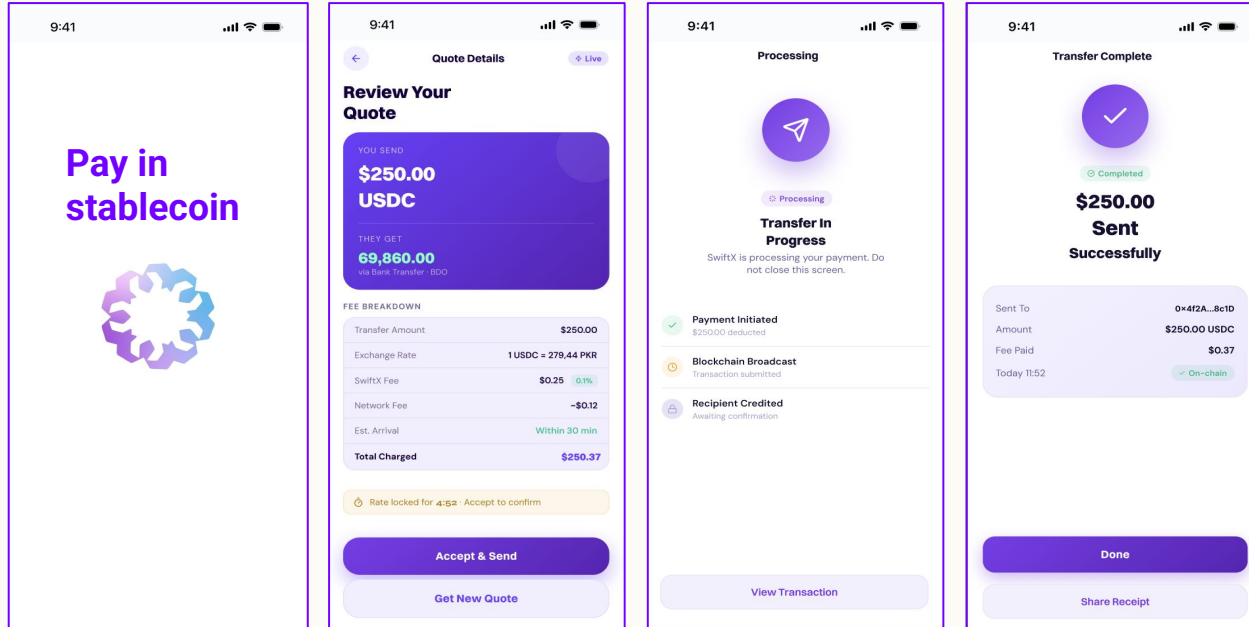

Users have the option to make cross border payments to multiple countries and currencies, utilizing fiat or stablecoin rails

The amount is auto-calculated based on the stablecoin/fiat currency pair pricing

Recipient information is required to the same degree as a regular transfer

MAL: Making a payment in stablecoin (option to seamlessly use fiat account funds)

Users can make payments in stablecoin, utilizing their fiat bank accounts funds seamlessly (2/2)

Once the user reviews their quote, with full visibility on the prevailing exchange rate for the fiat or stable pair, they can choose to accept and send

Once the transfer is initiated, they are shown the processing screen and, if applicable, the blockchain to view the transfer

SwiftX is building the institutional infrastructure for stablecoins in 2026

Regulatory scope expansion

SwiftX is expecting licensing with VARA in the UAE, PVARA in Pakistan, and special permission for stablecoin powered remittances from SAMA, KSA in early 2026

Card issuance

SwiftX can enable MAL to issue crypto and stablecoin-enabled cards, allowing customers to spend digital assets through traditional card networks while maintaining full regulatory compliance

Stablecoin intra-institutional settlement layer

With select partners, we expect to enable an intra-bank stablecoin settlement layer, making cross border settlement between geographies near instant, and optimizing access to liquidity

Let's build financial infrastructure for the next billion, together.
