

SWIFTX × MAL

Partnership Framework & Commercial Terms

Stablecoin-Powered Cross-Border Payments Infrastructure

Confidential — March 2026

1. Parties & Purpose

Field	Detail
Party A	SwiftX DLT — Stablecoin infrastructure provider (Canadian MSB FINTRAC / Swiss VQF licensed; pending VARA UAE, PVARA Pakistan, SAMA KSA)
Party B	MAL — UAE-licensed financial institution providing banking and payments services
Partnership Type	Technology & Distribution Partnership
Objective	Embed SwiftX stablecoin wallet infrastructure within MAL's native app and banking platform to enable regulated cross-border remittances and payments across the UAE (pilot), Global → South Asia corridor (pilot), Global
Date	March 2026 (effective upon execution of definitive agreement)

This document sets out the agreed partnership structure, process flows, and commercial models governing the collaboration between SwiftX and MAL. It is intended as the basis for a formal partnership agreement and does not constitute a binding contract unless separately executed by authorised signatories of both parties.

2. Partnership Structure

2.1 Role Definition

Entity	Role & Responsibilities
SwiftX	Infrastructure layer: wallet technology, stablecoin rails, FX/conversion engine, liquidity management, AML/KYC/KYB/Travel Rule stack, API, SDK and dashboard, payout partner integrations, regulatory licensing
MAL	Distribution layer: customer acquisition and KYC onboarding, branded app interface, regulatory host, customer relationship

	ownership, balance sheet management for fiat on/off-ramp, compliance oversight of end users
Pakistan + Other payout partners (pricing and capability dependent)	Downstream payout partner: last-mile PKR disbursement via wallet and payout network in Pakistan, operating via the SwiftX wallet infrastructure layer

2.2 MAL: optimized functionality and customer offering

- Embedded Web3 stablecoin wallet within MAL's existing app — white-labelled, MAL-branded
- Native SDK and API integration unlocking send, receive, convert and pay-out in stablecoin — enabling MAL to embed SwiftX functionality directly within its existing mobile and web interfaces without rebuilding core flows
- Real-time dashboard for transaction monitoring, FX visibility and reporting
- Built-in compliance stack (KYB, AML, transaction monitoring, Travel Rule)
- Access to SwiftX payout partner network: Pakistan, India, Philippines, Bangladesh, Indonesia, Nepal, etc
- Future state: card issuance, intra-institutional settlement layer, VARA / SAMA-licensed stablecoin products

2.3 SwiftX: deployment capability

- Distribution access to MAL's customer base across the South Asia (pilot) + global remittance corridors
- MAL's regulatory licensing as the compliant financial institution host at point of receipt
- Volume commitments (to be agreed — see commercial models)
- Branding and co-marketing

3. End-to-End Process Flow

3.1 Wallet Onboarding Flow (MAL User)

The following steps describe how a MAL retail or business customer creates and activates a stablecoin wallet within the MAL app, powered by SwiftX infrastructure.

1	User Initiates Wallet Creation User selects 'Create Wallet' within the MAL app. SwiftX infrastructure provisions a custodial or non-custodial wallet address on the chosen network (Ethereum ERC-20 / USDC or USDT).	MAL App (SwiftX layer)
----------	--	-------------------------------

2	KYC Verification If not already KYC-verified within MAL, user completes identity verification. SwiftX's embedded KYB/KYC layer cross-references MAL's existing KYC data. KYC status activates full wallet limits.	SwiftX Compliance Stack
3	T&C Acceptance & Wallet Activation User accepts SwiftX platform agreement and MAL addendum. Wallet is activated with initial limits. 2FA enforced by default.	MAL (user consent)
4	Wallet Live Wallet is active. User can receive stablecoin, whitelist beneficiary wallets, set auto-convert rules (USDC → AED), and initiate outbound transfers.	Live — both parties

3.2 Outbound Remittance Flow (UAE → Pakistan)

A MAL customer sends funds to a recipient in Pakistan. The transfer is routed via SwiftX's stablecoin rails and settled through SwiftX's PKR payout network

1	Sender Initiates Transfer MAL customer selects Pakistan as destination, enters PKR amount or AED amount. Live FX rate (eg. 1 USDC = X PKR) is displayed via SwiftX RFQ engine. Rate locked for 4 minutes.	MAL App (SwiftX API)
2	Funding Source Selection Customer chooses to fund from: (a) MAL stablecoin wallet balance, or (b) MAL fiat bank account (auto-converted AED → USDC at point of send).	MAL / SwiftX
3	Recipient Information Captured Sender enters recipient bank details (bank name, IBAN/account, CNIC) or partner wallet ID. Data encrypted and not stored post-transfer.	MAL App

4	Compliance Check & Broadcast SwiftX runs AML screening and Travel Rule compliance on both sender and receiver. Transaction broadcast to blockchain. Real time settlement	SwiftX Compliance
5	Stablecoin Receipt by SwiftX Stablecoin arrives in SwiftX's liquidity wallet. SwiftX triggers partner payout API with PKR equivalent amount and recipient bank/wallet details.	SwiftX → Partner
6	PKR Disbursement Partner disburses PKR to recipient's bank account or partner (SwiftX managed) customer wallet. Confirmation returned to SwiftX. Average total time: under 5 minutes.	Partner (Pakistan)
7	Confirmation to Sender MAL app displays 'Transfer Complete' with receipt, blockchain hash, and fee breakdown. Sender can share receipt.	MAL App

3.3 Auto-Convert Flow (Stablecoin → Fiat)

For MAL customers or payout partner users who prefer to hold or receive fiat rather than stablecoin, auto-convert rules can be configured:

- AED → USDC on send (triggered at point of outbound transfer)
 - USDC → AED on receipt (triggered when stablecoin lands in MAL wallet)
 - Balance overflow rule: convert to fiat when wallet exceeds a defined USDC threshold
 - Rate threshold alert: convert only when FX rate exceeds a set minimum
 - Scheduled conversion: weekly or monthly recurring conversion
-

4. Commercial Model

1. Contract Foundations

Component	Terms
Integration Fee	USD 200,000 one-off (payable on signing)
Contract Term	24 months from execution date
Monthly Platform Fee	USD 5,000 / month
Settlement Currency	USD or stablecoin
Governing Law	DIFC or ADGM
Exclusivity	12 months on stablecoin wallet product (post Go Live)
SDK Delivery	4 weeks from signing (8 weeks maximum)

2. Remittance Pricing (all markets, indicative)

Applicable to standard fiat-to-fiat corridors and payout partner disbursements processed through SwiftX rails.

Fee Component	Structure
SwiftX fee	0.5% of send amount
MAL Distribution Commission	Any charges to customer above SwiftX fee
Volume Commitment (MAL)	\$50M/month within 6 months of go-live
Payout Partner Margin	Cost + 15% charged to MAL

Market pricing tiers (market specific nuances notwithstanding)

Volume tiers	Price per transaction (\$)	FX conversion premium	Bank validation	Cost for T+1 funding	Cost for funding after T+1 and/or overnight
\$10,000,000	\$0.075	10bps	Free	0	-8bps
\$25,000,000	\$0.050	15bps	Free	0	-8bps
\$50,000,000	\$0.025	20bps	Free	0	-8bps
\$100,000,000	\$0.000	30bps	Free	0	-8bps

3. Pakistan Specific Pricing at launch

This is indicative based on existing pricing, and is subject to changes in regulations

Fee Component	Structure
Per transaction fee (under \$100 USD)	\$1
Per transaction fee (over \$100 USD)	Eligible for Pakistan Remittance Initiative (PRI) scheme = 18 SAR rebate

4. Wallet Infrastructure Pricing (Digital Wallet Product)

Applicable to MAL's white-label digital wallet product powered by SwiftX infrastructure. Pricing mirrors market standard tiered wallet economics. Includes stablecoin custody, on/off ramp, and programmable wallet functionality.

4a. Per-Wallet Creation Fee (tiered)

Wallet Volume Tier	Market Reference Pricing	SwiftX Charge to MAL
Up to 100 wallets	\$60 / month (Starter)	\$0.80 per wallet created
Up to 10,000 wallets	\$600 / month (Basic) = ~\$0.06/wallet	\$0.10 per wallet created
Up to 50,000 wallets	\$2,800 / month (Pro) = ~\$0.056/wallet	\$0.08 per wallet created
50,000+ wallets	Enterprise (custom)	Negotiated; min \$0.05 per wallet

4b. Wallet Operational & Transaction Fees

Fee Component	Structure
Stablecoin Send / Receive	\$0.10–\$0.25 per on-chain transaction
On-Ramp Fee (Fiat → Wallet)	1.0% of deposit amount
Off-Ramp Fee (Wallet → Fiat)	1.0% of withdrawal amount
Wallet-to-Wallet Transfer (Internal)	\$0.05 per internal transfer
Wallet Custody / Storage	No AUM fee
Policy & Governance Controls	Included at all tiers, fully compliant solution
Travel Rule Compliance	Pass-through at cost (SumSub integration)

Cross-Border Remittance via Wallet	0.3–0.5% of send amount + FX spread
---	-------------------------------------

5. Indicative Implementation Timeline

Phase	Activities & Milestones
Phase 1 — Agreement (Weeks 1–4)	Finalise commercial model; execute definitive partnership agreement; assign technical and compliance leads from both parties
Phase 2 — Integration (Weeks 4–10)	SDK and API integration with MAL core banking and mobile app; wallet provisioning and KYC flow integration; partner payout API testing on Pakistan corridor; UAT in staging environment
Phase 3 — Pilot (Weeks 10–16)	Soft launch to select MAL customers; live testing UAE → Pakistan corridor; monitoring of settlement times, FX accuracy, and compliance flags; review commercial model vs. actual unit economics
Phase 4 — Scale (Month 4+)	Full launch across MAL customer base; activate additional corridors (India, Philippines, Bangladesh); card issuance and intra-bank settlement layer (pending VARA / SAMA licensing)
Regulatory Milestones	SwiftX VARA UAE licence (expected Q1–Q2 2026); SwiftX PVARA Pakistan (expected Q2 2026); SAMA special permission for stablecoin remittances (expected Q1–Q2 2026)

6. Proposed Next Steps

1. Align on preferred commercial model target: within 1 week
2. Agree volume commitment and minimum term parameters
3. Legal review of framework by both parties' counsel; open redline for negotiation
4. Technical scoping call: MAL engineering + SwiftX integration team; assess API and SDK readiness, core banking connection, and mobile app integration requirements
5. Corridor payout terms and wallet-to-wallet integration scope for Pakistan (launch specific)
6. Execute partnership agreement and commence Phase 1

This document is confidential and prepared solely for MAL. It does not constitute a binding agreement. All commercial terms are indicative and subject to negotiation and formal execution.
