

SwiftX / SaturnX — Call Prep Sheet

Fahed ↔ Faizan Ahmad | 11:30 AM UAE | 2 Mar 2026 | CONFIDENTIAL

WHO THEY ARE

SwiftX = subsidiary of **SaturnX** (Dubai, founded 2024). Stablecoin payments infra. API-first platform: stablecoin liquidity + FX routing + compliant payout networks.

Funding: \$3M seed (White Star Capital). **Volume:** \$250M+ in first 5 months, profitable.

Flagship corridor: Gulf → South Asia. Live client: Beyon Money (Bahrain) — stablecoin-powered remittances.

Mirnas Brescic (CEO) — ex-Rain, ex-Bitpanda, IAEA. FX/treasury/crypto. **Faizan Ahmad** — ex-Rain (regulatory), ex-Aquanow. 10+ yrs financial consulting.

WHY IT MATTERS

- ✓ **Stablecoin-native** Directly compatible with Mal's USDC treasury — no separate fiat bridge needed
- ✓ **Pakistan is their target** Actively expanding into PK with existing banking relationships
- ✓ **API-first** Fits lean orchestration philosophy. Integration in days not months (their claim)
- **Early-stage risk** Founded 2024, only \$3M raised. Verify live connections vs. pipeline
- **Don't single-thread** Always maintain parallel direct bank option (Meezan preferred)

TOP PK BANK CANDIDATES (ask Faizan which they work with)

Bank	Why	Watch Out
Meezan Bank (#1)	Largest Islamic bank. Open API gateway. Temenos core. AAA rated. Best Sharia fit.	Slower commercial cycles. May need senior intro.
Bank Alfalah (#2)	Most digitally advanced. Owns 9.9% of Jingle Pay. Alfa Payment Gateway.	Jingle Pay overlap could create channel conflict.
Faysal Bank	Direct Payoneer link = freelancer angle. Converted to full Islamic.	Smaller network (~550 branches).
HBL	Largest bank. 1,700+ branches. Strongest remittance brand (FastTransfer).	Poor FX rates. Less fintech-forward. Slower to integrate.

PROPOSED FLOW (validate with Faizan)

USD in (Zenus/ACH) → USDC treasury (Circle) → **SwiftX settlement (USDC→PKR, FX routing)** → PK bank partner (Raast/IBFT) → End user (bank/wallet)

Critical Q: Does SwiftX handle settlement AND local disbursement end-to-end, or only the stablecoin→fiat conversion? This changes whether Mal needs a separate bank integration.

KEY QUESTIONS FOR THE CALL

Partnership	Which PK banks are LIVE (not pipeline)? Meezan? Alfalah? Does SwiftX hold the bank relationship, or does Mal contract directly? Do you support mobile wallet payouts (JazzCash, Easypaisa)?
Economics	All-in cost per payout (SwiftX bps + bank spread + local rail)? USD→PKR FX spread? Fixed or variable? Volume tiers at 10K / 50K / 100K monthly txns? Can we send USDC directly or must convert to fiat first?
Settlement	Settlement speed — T+0 or T+1? Pre-funded? FX rate locking — window or spot only? How are PKR liquidity pools funded? Volatility handling?

Compliance	SBP regulatory status? Own license or via bank partners? CNIC/NICOP beneficiary verification support? Can Mal plug in own KYC (Oscilar)? AML/sanctions screening?
Technical	API sandbox access — can we get it this week? Realistic integration timeline to first live payout? Payout status webhooks? Failed payout handling / reconciliation? Uptime and success rate SLAs?
Risk	Max monthly volume on PK corridor today? If SwiftX has issues, can Mal go direct to the bank partner? Can you provide a Beyon Money reference on corridor performance?

COMMERCIAL BENCHMARKS

Parameter	Acceptable	Target
All-in payout cost	< \$2.00 / txn	< \$1.00 / txn
FX spread (USD→PKR)	< 100 bps	< 50 bps
Settlement	T+1	T+0
Setup cost	< \$25K	\$0 (waived for volume)
Monthly minimum	< \$5K	None / pay-per-use

Ref: Thunes typically 50–150 bps + per-txn fees. SwiftX + direct bank must be materially cheaper to justify the added counterparty risk.

POST-CALL ACTIONS

1. Get written indicative term sheet from SwiftX within 1 week — no architectural commitments on verbal economics
2. Request API sandbox credentials immediately
3. Initiate parallel direct outreach to Meezan Bank — do not single-thread on SwiftX
4. Request Beyon Money reference intro for honest corridor performance assessment
5. Architect payout layer as provider-agnostic: SwiftX primary, fallback to Thunes or direct bank API
